Satisfaction with dynamic work progress.

MISSION STATEMENT

To provide innovate ideas and to create value that makes a difference.

OUR PRODUCTS

- Integrated School Management System for Primary, Junior and High Schools
- Electronic Medical Records System
- Pharmacy Management System
- E-Price: Integrated Agricultural Management System
- E-Business systems
- Accounting and Pos Systems etc.

OUR SERVICES

- Application Design and Development
- Database Development, Administration and Management
- Network, CCTV Cameras and intercom
- IT Consultancy Services
- Computer supplies.
- IT Staff outsourcing
- Website design and hosting etc.

OUR PROPOSAL

ELECTRONIC MEDICAL RECORDS- SYSTEM (EMR)

The Electronic Medical Record is an easy to use, complete. Electronic health Record (EHR) and Electronic Medical Record (EMR) that aims to meet the needs of low resource environments by leveraging a tapestry of existing open source products. Our products are developed from certified world's a leading Open source medical application called OpenEMR and customized to well suited to our local medical standards.

Our EMR is the most popular electronic health records and medical practice management solution. EMR's goal is a superior alternative to its proprietary counterparts. With passionate volunteers and contributors dedicated to guarding EMR's status as software solution for medical practices with a commitment to openness, kindness and cooperation.

FEATURES AND FUNCTIONALITY OVERVIEWS OF EMR

EMR aims is to meet the needs of hospitals in low resource environments by leveraging a tapestry of existing An Integrated Solution. The information that EMR makes accessible helps healthcare providers to improve efficiency and quality of patient care, reduce errors in clinical encounters and advocate for issues related to public health.

1. An Integrated Solution - Manage patient information across registration, point of care, investigations, and billing
2. Intuitively Designed - Simple to use at the point of care, with minimal training required
3. Flexible - Allows for unique workflows and processes based on each hospital's needs
4. Modular - Choose parts of EMR and integrate with existing systems
5. Infrastructure Appropriate - Hosted and operated at the hospital site, requiring no dependence on Internet
6. Adaptable - EMR can be used on a variety of devices including tablets and laptops

Electronic Medical Records System is full Hospital management system with following modules:

1. Patient Registration.
2. Patients charts management .
3. Clinical Services
4. Appointment Scheduling
5. Laboratory Management
6. Radiology and PACS
7. Pharmacy Management & Prescription
8. Patient Document Management
9. Patient Billing and Accounting, Stock / Inventory Management
10. Reporting
11. Multi-language support etc.

THE SPECIFICATION PHASE

PREPARATION OF A DETAILED SPECIFICATION

The detailed specification shall form the basis for the customisation and the development to be undertaken during the implementation Phase

As a minimum, the detailed specification shall contain a general description of the Software (general specification), a detailed description of the functionality of the Software (functional specification) and a description of technical solutions (detailed technical specification).

TRAINING

The agreed training of the employees shall be carried out professionally and to a good technical and pedagogical standard, in accordance with the requirements specified. The training shall be tailored to the needs of the various user groups, for example end users, super users, systems administrators, operational personnel, etc.

IMPLEMENTATION PHASES

- Setup implementation team
- Gather requirements and analyse needs
- Configure the system
- Showcase
- Setup and deployment
- Data Migration
- Rollout and training
- Define post- deployment support
- Plan for adoption
- Create sops for managing downtime
- Manage on going learning and improvement

IMPLEMENTATION SCOPE TO INCLUDE

- System configuration and customization to support multi-specialty clinical operations.
- User roles and security setup
- Interface development
- Application training
- Acceptance testing
- Support reporting requirements etc

PRICING

The pricing can be determined by services to be offered, and scope of study and analysis of the project.

Refer to attached Invoice for price structure

Total cost Include:

1. Full complete package for Electronic Medical Records system (EMR) all modules ie Accounting, pharmacy, Laboratory, Medical Billing, patient Scheduling, Reports, patient Demographic, unlimited users, Web-based Application, Radiology.
2. Installation, customization, user training and support, maintenance and upgrade for 6 months.
3. The charges are valid for One year after which the Another MOU and service level agreement shall be reached to determine in case more technical support of the EMR system

NB. The above charges are valid for 12 months after which the Another MOU and service level agreement shall be reached to determine in case more technical support of the EMR system

KEY PROJECT MEMBERS

Team Member	Role	Contact	Responsibilities
Sombi willingstone	Project Manager/system administrator/support team	Mob:0750905899; 0789486544; Email: willings12@gmail.com	Team Leadership, Documentation, Creating Charts and Schedules, Risk Analysis. Preparation of training manuals for users Managing Risks and Issues, Monitoring and Reporting, Progress. Training staff members, end user support, work closely with clients
Masiga Moses	Software engineer/support team	0704008863, 0773405024 Email: masiga2005@gmail.com	Reviewing current systems Presenting ideas for system improvements, including upgrades Working closely with analysts, designers. Producing detailed specifications and writing the program codes Testing the product in controlled, real situations before going live Maintaining the systems once they are up and running

SYSTEM REQUIREMENTS (RECOMMENDED)

The following are the hardware and software requirement need to run the Electronic Medical Records System efficiently:

The software will run smoothly on a server with the following minimum configuration

Operating System	Windows
Web Server	Apache server
Database server	MySQL
Processor Speed	CPU - Quad core (8 cores, if in future you would want to run PACS integration from the same server)
RAM (Memory Size)	4 GB - 8GB (16 GB, if in future you would want to run PACS integration from the same server)
Hard Disk Space	500GB (doesn't include the disk space needed for PACS integration or if you plan to upload a lot of files/images)
Examples of computer models	I3
Browser	Chrome

NB: It is highly recommended to have one more machine as a backup machine that can take over in the scenario when the main server fails due to hardware / electrical issues. This backup machine can also be used to store database backups or old log files, and for load intensive reporting.

CHALLENGES

Noticeable challenges / issues that may affect successfully implementation of EMR

- ❖ Network instability
- ❖ Negative Attitude by the staff.
- ❖ Limited facilitation for smooth implementation process.
- ❖ Breakdown of hardware causing Gap in workflow
- ❖ Power back up in case of power shutdown
- ❖ Lack of Enforcement, Monitoring, supervision and implementation
- ❖ Inventory update ie Prices, Stock update, and services.
